# About the Authors

Elizabeth Capaldi Evans, PhD, is an associate professor of biology and animal behavior at Bucknell University in Lewisburg, Pennsylvania. Trained in zoology, ecology, and evolutionary biology, her research interests focus on the behavior, ecology, and neuroethology (the study of the nervous system as it functions during natural behavior) of insects, with a specific focus on bees. Honey bees are the main focus of her work, but she also conducts research on a variety of other bee species. Her studies have been published in a wide variety of scientific journals, including the multidisciplinary journal *Nature*, the *Annual Review of Psychology*, and the bee-focused *Journal of the Kansas Entomological Society*. Evans regularly speaks to local beekeeping clubs and organizations about her research and about other issues of importance to the beekeeping community.

Carol A. Butler, PhD, is the co-author of the Rutgers University Press question and answer series that includes *Do Butterflies Bite?* (2008), *Do Bats Drink Blood?* (2009), *Do Hummingbirds Hum?* (2010) and *How Fast Can a Falcon Dive?* (2010). She also co-authored *Salt Marshes: A Natural and Unnatural History* (2009) and *The Divorce Mediation Answer Book* (1999). She is a psychoanalyst and a mediator in private practice in New York City, an adjunct assistant professor at New York University, and a docent at the American Museum of Natural History.
